Tracker

Tracker is designed to supplement your current speed enforcement program. Moving or stationary, this time/distance computer calculates a target vehicle's speed as it covers a known distance. It works without radar or light waves, so it is invisible to radar and lidar detectors. Measuring less than 6.5" wide, it can be mounted virtually anywhere.

PATCO Speedline

PATCO was one of the first transit systems to incorporate automatic train operation for regular service. The PATCO ATO is an analogue system that makes use of pulse code cab signaling supplied by Union Switch and Signal. The cab signals supply one of five different speeds (20 mph or 32 km/h, 30 mph or 48 km/h, 40 mph or 64 km/h, 65 mph or 105 ...
